Abstract of JP4365493

PURPOSE: To industrially and inexpensively obtain the subject compound by culturing a variant belonging to the genus *Brevibacterium* or *Corynebacterium*, capable of producing L-glutamic acid, and having resistance to antibiotics with inhibitory action on cell wall synthesis. **CONSTITUTION:** A variant [e.g. *Brevibacterium lactofermentum*-vancomycin resistant variant AJ12,557 (FERM P-11,730)] belonging to the genus *Brevibacterium* or *Corynebacterium*, capable of producing L-glutamic acid, and having resistance to antibiotics with inhibitory action on cell wall synthesis, is inoculated into a medium having an osmotic pressure of 2,000-4,000 mOsm/kg.H₂O which is higher than a common medium in L-glutamic acid fermentation, subjected to shaking culture at 31.5 deg.C, L-glutamic acid is formed and accumulated in the culture solution and collected to give the objective L-glutamic acid.
